Privileged Access Workstation (PAW) Checklist

Security best practices for a PAW include:

- [ ] minimize attack surface & remote attacks to the machine

- [ ] device is not used for web browsing or emails

- [ ] do not install random applications on the device

- [ ] do not plug in USB sticks or external hard drive

- [ ] airgap from the production network

- [ ] do not connect using WIFI networks, only wired Ethernet to a secured network or VLAN.
